**SafetyLink®**

*Innovative  
Fall Protection*

Ladder**Link** is the essential entry point system to any height safety system. Made from marine grade aluminium the Ladder**Link** is designed to support a ladder, stopping sideways movement and therefore holding the ladder in place safely. In addition the Ladder**Link** has securing points to tie off the ladder providing a safe access point.

Material such as stainless steel when used without a protective membrane have a high corrosive effect on roof sheeting, this exposure when put in direct contact with roof sheeting will dramatically reduce the life expectancy of the sheet due to premature corrosion. Ladder**Link** is easy to install, unobtrusive.

### Benefits of choosing Safety**Link**:

Safety**Link's** Fixed Ladder**Link** has been manufactured from marine grade aluminium, this metal choice not only ensures a durable light weight product for installation, it also has the added advantage of being a compatible metal, with the Ladder**Link's** large surface area this is certainly an added advantage. Safety**Link** have finished this product off with a protective membrane in the form of a powder coat finish, this ensures your product is ready for any additional colouring you would like to apply.

- Made from marine grade aluminium.
- Quick and easy installation.
- Essential entry point system to stabilise your ladder.

*Safety**Link's** Fixed Ladder**Link** is a permanent bracket designed to stabilise your ladder. The Fixed Ladder**Link** has securing points to tie off the ladder providing a safe access point, eliminating sideways movement.*
