- **Various materials available**
- **Little or no maintenance**

Snaplock

Snaplock is a lightweight cladding system ideal for both roof and wall applications in commercial, industrial and residential environments. Its thin distinctive ribs and wide pans give it visual appeal. Snaplock looks similar to Standing Seam without the need of crimping the joints due to the "snapping" process. Available in 25mm and 38mm ribs, Snaplock can be manufactured in various widths to suit new construction or renovation projects.

Snaplock needs to be ventilated and continuously supported by plywood. The panels are held in place with concealed clips and screwed onto plywood at maximum 600mm centres.

Snaplock 38 x 485 Monument™

DISCRETE - CLASSIC - SOPHISTICATED AND VERSATILE.
