

ECLIPSE™

ARCHITECTURAL PANELS

- **Thin, discrete ribs**
- **Variable cover widths**
- **Snap to install**
- **Cut to length daily**
- **Various materials available**
- **Little or no maintenance**

Eclipse™

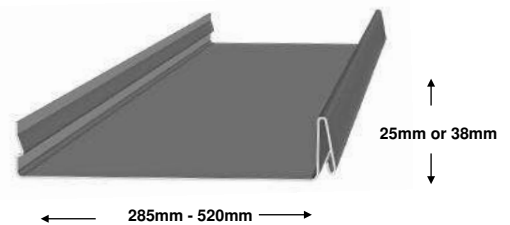

Eclipse™ is a lightweight cladding system ideal for both roof and walling applications in commercial, industrial and residential environments.

It's thin distinctive ribs and wide pans give it visual appeal. Eclipse™ looks similar to traditional Standing Seam but removes the requirement to manually seam the joints due to the "snapping" process. Available in 25mm and 38mm ribs heights, Eclipse™ can be manufactured in various widths to suit new construction or renovation projects.

The panels are held in place with a concealed fix clip which allows infinite expansion and contraction.

Choose from various materials such as Colorbond®, Zinalume®, Zinc, copper, Aluminium, Stainless Steel, Corten and the UniCote® Lux range.

Eclipse™ 38 x 485 Monument®

DISCRETE - CLASSIC - SOPHISTICATED AND VERSATILE.
